

# Making the biggest number

Thousands	Hundreds	Tens	Ones

Roll four dice and use them to create the largest number possible. Do this by placing the number from a single die into each column above. Then just read from left to right to see what the number is. Like this

I rolled a 1,4,5 and a 6

I wrote this below for a total of 6,541

Thousands	Hundreds	Tens	Ones
6	5	4	1

# Making the smallest number

Thousands	Hundreds	Tens	Ones

Just like before. Now repeat again and make the smallest number possible. If your tutor has larger dice (with 10 sides for example) does this make it easier to get the numbers you want?
